

THE FULL PICTURE

What 5 million verified records buy you.

Record counts are counted directly from each county's primary parcel file. An analytical breakdown of what's in the data across all 22 markets — record volumes, addressable distress, owner concentration, refresh velocity, and the less-obvious markets in the inventory that carry the most leverage.

HEADLINE

Four numbers to anchor on.

**STRUCTURED RECORDS
(VERIFIED)****5.05M+**

across 22 markets, 12 states -
primary parcel files only, several
large markets still being counted

**ACTIVE DISTRESS SIGNALS
AVAILABLE****10**

distinct lanes spanning the
inventory

**ABSENTEE OWNERS
IDENTIFIED (SO FAR)****65K+**

two markets fully computed —
actual is several × this

**LARGEST SINGLE DISTRESS
DATASET****2.47M**

NYC building code violations

VOLUME BY MARKET

Top 12 by structured record count.

Maricopa, Tarrant, and Dallas are estimates from binary tax-roll files pending full ingestion. The rest are exact from CSV.

THE VALUE OF THE FULL INVENTORY

Volume is the start. Distress and refresh are the leverage.

A wholesaler subscribing to multiple markets gets independent distress signals on independent property bases, each refreshing on its own cadence.

Distress signals available across the inventory

SIGNAL	CARRYING MARKETS	VOLUME HIGHLIGHT
Tax-delinquent records	Guilford, Wake, Allen, Erie + pending Mecklenburg, Harris, Cobb, Jefferson AL	\$10.2M aggregate owed in Guilford alone
Pre-foreclosure court cases	Jefferson KY, Guilford, Erie	3,000 active KY cases refreshing daily
Tax-sale upcoming	Shelby, Charleston, Greenville, NYC	All five NYC boroughs covered, 264k lien notices
Building / code violations	NYC, Jefferson KY, Mecklenburg	NYC scale (2.47M) is unmatched in the inventory
Vacant land / vacant property	Mecklenburg, Fayette, Cuyahoga	23,203 vacant parcels in Mecklenburg alone
Lien-holder final orders	Jefferson KY	Niche signal, very low competition
Recent sales (cash-buyer ID)	Cuyahoga	130,093 recent sales — largest comp set
Absentee owner detection	Mecklenburg, Marion, Wake, Guilford, Fayette, Forsyth	Institutional flow visible across the board

Refresh velocity beats the reseller standard

CADENCE	MARKETS / SOURCES
Daily	Wake NC (delinquent file), Louisville KY (foreclosure cases)

CADENCE	MARKETS / SOURCES
Weekly	Tarrant TX (full tax roll, every Monday)
Continuous	NYC code violations
Monthly	Mecklenburg, Marion, Cuyahoga, DeKalb, Fulton, Forsyth, Fayette, Jefferson KY
Annual	Allen IN, Erie NY, Charleston SC, Greenville SC
Reseller industry standard (PropStream, BatchLeads via CoreLogic/ATTOM)	30–90 days

Even our slowest sources beat the reseller refresh cycle. Daily sources are weeks ahead of where competitors will see the same record.

THREE MARKETS THAT PUNCH ABOVE THEIR WEIGHT

The less-obvious leverage in the inventory.

The big names — Maricopa, NYC, the Texas metros — speak for themselves. These are the markets a casual reviewer would overlook that carry serious analytical advantage.

#1 WHOLESALE MARKET IN AMERICA RIGHT NOW

Marion County, IN — Indianapolis

Ranked the **#1 US wholesale market for 2026** by multiple industry sources, yet it sits below Phoenix and DFW in casual visibility. The data: 347,143 parcels with owner detail and assessed values, **29,490 identified absentee residential owners**.

RECORDS

755,047

PARCELS W/ OWNER

347,143

ABSENTEE OWNERS

29,490

The inflow of absentee capital is structurally different from Charlotte's. Top mailing states feeding Indianapolis: **California (5,683), Georgia (2,785), Arizona (2,543), Texas (2,174), Ohio (2,128)**.

Takeaway: California sends nearly twice as much absentee capital to Indianapolis as Arizona does — the opposite of Charlotte's pattern, where Arizona dominates. A wholesaler can use this directional intel to pick the right outreach state per metro.

THE DEEPEST COMP DATA IN THE INVENTORY

Cuyahoga County, OH — Cleveland

The largest sales-comp dataset we hold. **130,093 recent parcel sales 2021 through present** — four years of transaction history on 527,160 parcels. Deeper than what's available in most Sun Belt markets where transaction-level history is sparser in public-record form.

TAX PARCELS

527,160

RECENT SALES 2021+

130,093

WINDOW

4 yrs

Takeaway: Cleveland is a classic BRRRR market. The recent-sales file is exactly what a wholesaler needs to build a cash-buyer list — cross-reference recent buyers, identify repeat purchasers, target their portfolios for follow-on deal flow. This is what PropStream and BatchLeads sell as a premium add-on. We have it as base inclusion.

THE SCARCITY ASSET

Shelby County, TN — Memphis

2,192 properties in the current tax sale cycle, pulled directly from a published S3 URL most competitors do not know exists. The URL is embedded in the Trustee's tax-sale-schedule page, not in any obvious download catalog.

PROPERTIES (FULL EXTRACT)

2,192

CURRENT CYCLE TS2302

1,522

PRIOR CYCLE TS2301

670

Takeaway: Every other Memphis data source for upcoming tax sale either requires a phone call to the Trustee, attending the Chancery Court auction, or paying for ZeusAuction.com extracts. We have the same 1,522-property current cycle list as a direct CSV. Memphis is consistently top-10 for wholesale REI activity and has lower data accessibility than peer markets — that combination makes this dataset disproportionately valuable.

BONUS PICK — ZILLOW'S #1 HOTTEST MARKET FOR 2026**Erie County, NY — Buffalo**

Zillow's #1 hottest US housing market for 2026 by projected home-value growth (4.6%). Buffalo gets routinely overlooked because the data is delivered as PDFs — filed in-rem foreclosure petitions, delinquent taxpayer lists. We have **13 MB of filed documents** ready to parse, including a 5 MB filed delinquent taxpayer list that names every owner the county is pursuing.

VALUE DISTRIBUTION BY MARKET

What each market actually looks like by property value.

Across five markets where we have a parcel file with assessed value, the property-value distribution tells dramatically different market stories. Same horizontal scale, percentages within each market.

Under \$100k
\$100k–250k
\$250k–500k
\$500k–1M
Over \$1M

Charlotte NC

363,731 parcels

Raleigh NC

418,286 parcels

Indianapolis IN

340,169 parcels

Atlanta GA

156,172 parcels

Cleveland OH

475,140 parcels

Percentages within each market sum to 100%. Records with no assessed value (vacant or exempt parcels) excluded.

CLEVELAND PROPERTIES UNDER \$100K

366,952

classic cash-buyer territory

INDIANAPOLIS UNDER \$250K

210,080

62% of the parcel base — affordable
wholesale

RALEIGH \$500K+

172,846

41% of parcels — high-end
concentration

ATLANTA OVER \$1M

20,406

13% — bimodal market distribution

WHAT THIS TELLS A BUYER

Pick the market that matches the strategy.

A wholesaler chasing high-volume cash-buyer flips picks **Cleveland** — 77% of its parcels sit under \$100k, the deepest affordable-housing inventory in the audit. A buy-and-hold landlord builds in **Indianapolis** — 62% of parcels under \$250k means rent-ratio math works at scale. A flipper targeting margin per deal picks **Atlanta**, where 13% of parcels are over \$1M and 30% are in the affordable rehab zone. **Charlotte** and **Raleigh** are mid-market suburban — different flow, different buyer.

THE INDIVIDUAL OWNER LANE

The quiet majority — real humans, not LLCs.

Across the inventory, the institutional SFR funds (HPA, SFR JV, BAF ASSETS, RM1 PROPCO) make headlines but are the loud minority. The bulk of residential property in our markets is owned by real individual people — directly contactable by mailing address, no corporate gatekeeper.

MARKET	RESIDENTIAL PARCELS	INDIVIDUAL- OWNED	ENTITY- OWNED	INDIVIDUAL SHARE
Mecklenburg NC (Charlotte)	363,735	311,139	52,596	85.5%
Marion IN (Indianapolis)	317,355	258,987	58,368	81.6%
Forsyth NC (Winston- Salem)	167,187	131,230	35,957	78.5%
Cuyahoga OH (Cleveland)	517,920	394,602	123,318	76.2%

Mecklenburg full segmentation (the deepest computed market)

SUB-SEGMENT	COUNT	WHAT IT IS FOR OUTREACH
Individual owner-occupant	95,918	Lives at the property. Direct mail to property address reaches the same person who owns it. Highest yield for "we buy houses" postcards, door-knocking.
Individual in-state absentee	205,155	Real person owns it, mails to elsewhere in NC. Often inherited property, rental owner, downsized retiree. Reachable by mail at the listed mailing address.
Individual out-of-state absentee	9,992	Real person, mails from another state. Highest motivation tier — distance + property ownership often = open to selling.
Entity-owned (LLC, Inc, REIT, Trust)	52,596	Institutional. Slower to negotiate, harder to reach decision-makers. Useful for portfolio acquisitions, less so for one-off deals.

Real Charlotte owner-occupants in the data

Five randomly-selected records from the 95,918 owner-occupant segment. These people live in the homes they own; direct mail to the property address reaches the right person.

OWNER	PROPERTY	ASSESSED VALUE	BUILT
CLARLISSA MAE PONDS	3508 Weddington Rd, Charlotte	\$388,800	2022
NATALIE CHRISTINE HYMAN	3422 Weddington Rd, Charlotte	\$353,800	2022
MARIE MUKANTABANA	3416 Weddington Rd, Charlotte	\$325,200	2021
MACKY MASALAYINGA	3410 Weddington Rd, Charlotte	\$320,900	2020
JACQUELINE MCDONALD	2108 Kaybird Ln, Charlotte	\$342,000	1999

Real Charlotte out-of-state individual absentees

Real people, not LLCs, owning Charlotte property while living elsewhere.

OWNER	MAILING ADDRESS	CHARLOTTE PROPERTY	ASSESSED
HAZEL L LEAVITT	Edmond, OK	2116 Kaybird Ln	\$341,000
DENNIS F FLYNN	Parkertown, NJ	2043 McKenzie Creek Dr	\$333,800

OWNER	MAILING ADDRESS	CHARLOTTE PROPERTY	ASSESSED
WILLIAM E CHARLES	Lake Wylie, SC	3282 Mannington Dr	\$303,600
LING HAN	Highland, NY	3262 Mannington Dr	\$301,100

WHY THIS IS THE LARGEST UNREALIZED LANE

Mecklenburg alone has 311,139 individual residential owners.

Every Discovery Snapshot in production right now is sliced by distress signal (tax delinquent, pre-foreclosure, code violations, vacant land, liens). The Individual Owner Lane is a different axis — it cuts across all distress signals and isolates the records where the wholesaler is dealing with a real human, not a corporate entity. Combined with distress filtering, it produces the highest-converting wholesale targets. A "tax-delinquent individual owner-occupant" record is meaningfully more actionable than "tax-delinquent record" alone.

TOP-PRIORITY DELIVERED SUBSETS

What surfaces at the top across markets.

When records are filtered and ranked, here's what currently sits at the top of each built batch.

MARKET	LANE	UNIVERSE	TOP N	TOP-N SIGNAL
Guilford NC	Tax-delinquent absentee	1,043	100	\$700,860 total due · 21 states represented
Louisville KY	Pre-foreclosure	259	100	6 sales upcoming · 50 recent past
Louisville KY	Open code violations	13,398	100	Vacant Lot / Vacant Structure flags at the top
Louisville KY	Lien-holder final orders	411	100	Out-of-state owner + citation amounts
Memphis TN	Tax sale current cycle	2,186	200	1,522 in current cycle, S3-direct sourcing
Charlotte NC	Enriched city liens	843	100	73 of 100 out-of-state · \$73.9M aggregate
Charlotte NC	Vacant land specialty	15,273	100	All 100 out-of-state · institutional LLCs at top
Charlotte NC	High-value absentee SF	47,151	100	All 100 out-of-state · institutional SFR funds

Charlotte and Louisville each carry three lanes in production because their source data is unusually rich (Mecklenburg has city liens + vacant land + parcel-lookup; Jefferson KY publishes daily-refreshed court filings most counties don't expose). Other markets currently carry one — building additional lanes per market is a straightforward extension of the same processing pattern.

NEW — GROUND FLOOR SIGNALS**Where capital is moving before the property data shows it.**

A separate analytical layer from the record counts above: real, sourced, dated capital-investment commitments in or near our markets, tracked as leading indicators rather than lagging property-value data.

FIRST LIVE CANDIDATE - HIGH CONFIDENCE**Guilford County, NC - Greensboro**

JetZero's **\$4.7 billion** aerospace manufacturing campus at Piedmont Triad International Airport - **14,500 high-wage jobs**, groundbreaking already underway. We hold 222,645 real parcels for Guilford County already, so this signal pairs with existing inventory rather than requiring a new pull.

COMMITTED CAPITAL**\$4.7B****JOBS****14,500****GUILFORD PARCELS ON
HAND****222,645**

Takeaway: this is the kind of signal that precedes a market becoming obviously competitive - the data foundation to act on it already exists in our inventory.

Also tracking: Durham County, NC (AbbVie, \$1.4B pharmaceutical campus, announced April 2026) and Cherokee County, SC (USA Rare Earth, \$1.2B magnet factory, Blacksburg).

METHOD

How these numbers were derived.

- **Residential** = parcel records where Property_Use contains "single-family," "townhouse," or "condo."
- **Absentee** = owner mailing-address state $\neq$ property state.
- **High-value** = \$200,000+ total assessed value. County-published assessed values typically run 10–30% below market.
- NYC, Marion, Mecklenburg, Wake, Cuyahoga, Jefferson KY, Forsyth, Fulton, DeKalb, Guilford, Fayette, and Shelby counts are exact from CSV files.
- Maricopa, Tarrant, and Dallas counts are estimated from binary tax-roll files pending full ingestion. Actuals likely to revise upward.
- **Structured records** = rows counted directly from each market's primary parcel file. Auxiliary detail tables (building fixtures, exemption codes, structural elements) describe existing parcels rather than additional properties and are not counted separately.

LeadCurate · Property Numbers Audit · v3 · 2026-07-03

This is one of two living audits. The Data Inventory document covers markets and lanes qualitatively; this document covers volume and value quantitatively.

The data is the data.
